

Datalight FlashFX Pro and Spansion® MirrorBit® ORNAND™
Solutions Speed Integration for Wireless Handset
Developers

BOTHELL, Wash., — November 27, 2006 — Datalight Inc., the premier supplier of reliable software for device data storage, today announced an upgrade to FlashFX® Pro, now with customized support for Spansion® MirrorBit® ORNAND™ solutions. FlashFX Pro is an intelligent flash memory driver which improves the integration of flash memory into handsets. FlashFX Pro configuration settings allow developers to scale the software for the optimum code size and memory usage for each handset platform.

MirrorBit ORNAND solutions enable handset developers to scale their data storage capacity to their applications, delivering a NAND interface and the compelling cost structure of traditional NAND solutions with the reliability and fast read performance of NOR flash memory.

Both FlashFX Pro and MirrorBit ORNAND solutions are well-suited for use by handset manufacturers who require a single platform approach for their entire product portfolio: from the entry level market, such as pre-paid phones, to high-end devices with sophisticated multimedia features.

"MirrorBit ORNAND solutions are giving handset manufacturers the capability to design their next-generation phones with innovative digital content capabilities and more data storage," said Bob France, vice president, Corporate Systems Engineering at Spansion. "Working

Innovative technologies
for real-world embedded devices

with Datalight enables us to provide our customers with a complimentary software match, improving the performance and scalability of our customers' systems."

FlashFX Pro version 3.10 is available during the fourth quarter of this year through Datalight and its worldwide reseller network.

About Datalight

Datalight, headquartered just north of Seattle, Wash., develops technologies to reliably manage data in embedded devices. Datalight's file system, device drivers and operating system software ensures reliability, performance and flexibility and is available worldwide on many of today's most well-known mobile devices. For more information, see <http://www.datalight.com/> or call 800.221.6630.
